

**ROOFING & CLADDING  
BUILDING LIMITED**

**Roofing, Cladding & Building's  
Environmental Assessment Method**

Roofing, Cladding & Building Ltd recognises that day to day operations can impact the environment both directly and indirectly. We aim to protect and improve the environment through good management and adopting best practise wherever possible. RCB acknowledge the responsibility and will work to integrate environmental considerations into our business decisions and adopt greener alternatives wherever possible throughout our operations.

RCB's environmental policy is reviewed regularly and outlines our objectives and targets.

As part of our environmental responsibility, one of our key environmental management strategies is assessing our supply chain competency. Understanding our suppliers environmental impact gives us the knowledge necessary to effectively manage our own environmental impact.

We evaluate our supply chain sustainability and environmental handling by carrying out regular performance monitoring records of our suppliers. We also require our suppliers to complete a questionnaire to provide us with information as to how they apply appropriate environmental management measures. We request our suppliers, as manufacturers, provide relevant documentation such as Forest Stewardship Council (FSC)/ Programme for the Endorsement of Forest Certification (PEFC), BES 6001 Responsible Sourcing of Construction Products and Environmental Management System (EMS).
